

ANDRII MIROSHNYK

Copenhagen, Denmark, [+4571565733](tel:+4571565733), mirikandrew@gmail.com, [LinkedIn](#), [GitHub](#), <https://mirikkun.github.io/Portfolio>

SUMMARY

Highly skilled Unity Developer with 5+ years of experience in game architecture, performance optimization, and mobile game development. Proven ability to lead projects from conception to release, enhancing game feel and user engagement by up to 23%. Expertise in creating custom editor tools, implementing analytics pipelines, and optimizing build size and startup speed by 30% and 20%, respectively. Eager to leverage extensive C# and Unity skills to contribute to innovative game development at your company.

WORK EXPERIENCE

Middle Unity Developer

Copenhagen, Denmark

24Play

- Pioneered AR mobile game prototypes and developments utilizing MediaPipe for facial, pose, and gesture recognition.
- Augmented functionality and performance of existing AR projects, deploying optimizations that sustained over 30 FPS on mid-range Android devices.
- Re-architected real-time face cutout from a shader-based method to a face mesh generation pipeline leveraging MediaPipe landmarks, elevating FPS from 25 to 55 on mid-range Android devices.

Unity Developer

Copenhagen, Denmark

BG Games

- Spearheaded game architecture and design for Love Blast: Block Puzzle, guiding it to full release as lead developer within a three-person team.
- Engineered REST API integration for analytics, establishing an automated data pipeline for BigQuery streaming to generate retention and engagement reports, and implementing telemetry hooks to track player actions.
- Reduced build size by 30% and application startup speed by 20% through efficient resource management strategies.
- Developed custom Unity Editor tools for technical artists and level designers, including a visual level editor with validation, automated asset validators, content pipeline automation, and CSV import tools for rapid balance adjustments.
- Elevated UI responsiveness and user experience, crafting exceptional game feel that resulted in a 23% increase in user engagement and session duration.
- Utilized Zenject for dependency injection to construct a modular, reusable, and testable architecture.

Unity Developer

Copenhagen, Denmark

Lumighost

- Developed an online chess game featuring samurai characters, replacing traditional pieces with 3D models, implementing a character customization system with modular part swapping, and building a preview system for these customizations.
- Architected a sophisticated cutscene system to trigger elaborate fight sequences upon piece capture, incorporating real-time mesh slicing for

dismemberment effects, particle and decal systems for visual flair, and smooth camera transitions.

- Integrated a REST API for live quiz questions, implementing real-time synchronization and a leaderboard system with robust error handling and retry mechanisms.

EDUCATION

2019 – 2023	Igor Sikorsky Kyiv Polytechnic Institute Bachelor of Applied Math, Applied Math
2023 – Present	Oles Honchar Dnipro National University Master of Applied Math, Applied Math

SKILLS

Architecture	Performance Optimization
Game Feel	Custom Tools Creation
C#	Python
Unity	Unity Assets
Unreal Engine	Blender
Photoshop	Android Studio
Xcode	FMOD
Game Architecture	Asset Streaming
Performance Profiling	Memory Management
REST API Integration	Analytics
Mobile Development	Procedural Content Generation
SOLID Principles	Design Patterns
Custom Unity Editor Tools	GitHub
GitLab	Sourcetree
Jira	Trello
Slack	Notion
Confluence	Miro
Git Flow	Agile/Scrum
Zenject	UniTask
Addressables	DoTween
Spine	Shader Graph
Photon	FireBase
Agile/Scrum	

LANGUAGES

English (Upper-Intermediate)	Danish (Elementary)
Ukrainian (Native)	Russian (Native)

INTERESTS

Participate in game jams	Regularly explore new technologies
